Advanced TB Research Training Course

SEPTEMBER 13-17, 2021
7:30 AM - 11:00 AM PACIFIC TIME
Virtual format (registration is required)

Course Objectives:

- To understand the magnitude and dynamics of the TB epidemic on the local and global scale.
- To know the key policies and guidelines, research priorities, and implementation strategies.
- To develop research skills and understanding that span diverse disciplines from basic and translational sciences, to clinical interventions and disease modeling platforms.
- To learn the foundation of clinical research for tuberculosis
- To learn the latest advances in Mycobacterium tuberculosis microbiology and phylogeny
- To learn the latest advances in tuberculosis immunology and vaccine development
- To learn the latest advances in tuberculosis transmission & public health intervention strategies
- To know the landscape of current and future TB diagnostics and the associated challenges
- To understand the intersection of Mtb and HIV co-infection
- To foster communication and collaboration with emerging leaders from local communities and low- and middle-income countries.

Registration is required. Attendance rate will be $100USD per participant. However, this fee will be waived for people from LMICs and students taking the course for credit. Please register at...
